Title:

Innovations in Video Services as driver for Fibre Access

Biography:

Ingrid Van de Voorde received the MS degree in electrical engineering from the Free University of Brussels (Belgium) in 1990. At the University of Brussels, she studied optical information processing at the Applied Physics Department.

In 1990 she joined the Alcatel Corporate Research Center in Antwerp (Belgium). Starting research on APON systems she moved to more advanced PON systems and lead the European funded project PLANETS in which a Super-PON system was prototyped.

In 2000, she moved to the Network Strategy group of Alcatel where she focused on the higher layers, and amongst others elaborated with her team the introduction of Ethernet in access.

In 2003, she moved back to the Research& Innovation center to lead the research activities related to fixed access; and in 2008 she took up this responsibility in the new Bell Labs of Alcatel-Lucent. With the team she pushed already several innovations towards the business group.
